Ruohua Li

Status Update 2

Open DS for All

This week:

This week, I finished up the data collection, sentences segmentation, and word tokenization. Also, with the help of leaders, we create and familiar the use of Waston studio, which will be used as a platform for training.

Next week:

 I will start a draft of ppt as a compliment of Jupyter Notebook. Also, I will do data analysis of word occurrence, and hopefully create a plot. Right now, my Jupyter Notebook looks a little bit messy. I will fix that part as well next week and add more explanation around. Also, I will do some research of model creating and word embedding.

Block:

How to create a model by transformers.
